

Collaborate to learn

Course content

This course is about creating an understanding for collective learning. Participants will learn about their own strengths and resources in a collective learning environment. We will discuss impulses to learn effectively and create habits around learning in a high-performing team. The training will be highly interactive and includes many practical tools to integrate in participants' work and private lives.

Course objectives

- Explore the neuroscience of learning
- Develop effective communication skills for team collaboration
- Improving problem-solving and decision-making skills through metacognition
- Understand and foster a growth mindset
- Learn about collective resilience and use of team-resources
- Building trust and fostering a positive team culture

Methodology

Neuroblitz offers science and drama-based trainings. All trainings are based on applied improvisation. Using our Cognitive Improvisation Method, we develop hands-on exercises and live simulations. Our seminars, workshops and learning journeys become well-remembered experiences through our interactive way of facilitating.

Target group

High-Performing Teams, newly formed teams, teams that go through restructuring, shifts of focus or within the organization

Duration

4 hrs, 8 hrs as a solo-course or part of a longer learning journey e.g. weeks or months

Format

All formats (On-site, online or hybrid)
